

# UNIT 3 STUDY SHEET – TRIANGLE CONGRUENCE

## TOPIC #1: METHODS TO PROVE TRIANGLES CONGRUENT:

*\*In order to prove triangles are congruent, you must prove **THREE** corresponding parts are congruent!\**

<p style="text-align: center;"><b>SIDE-SIDE-SIDE (SSS)</b></p> 	<p style="text-align: center;"><b>SIDE-ANGLE-SIDE (SAS)</b></p>  <p style="text-align: center;"><i>*SIDE MUST BE <b>INCLUDED</b> BETWEEN TWO ANGLES*</i></p>
<p style="text-align: center;"><b>ANGLE-ANGLE-SIDE (AAS)</b></p>  <p style="text-align: center;"><i>side is not between the two angles</i></p> <p style="text-align: center;"><i>*SIDE IS <b>NOT INCLUDED</b> BETWEEN TWO ANGLES)</i></p>	<p style="text-align: center;"><b>ANGLE-SIDE-ANGLE (ASA)</b></p>  <p style="text-align: center;"><i>side is between the two angles</i></p> <p style="text-align: center;"><i>*ANGLE MUST BE <b>INCLUDED</b> BETWEEN TWO SIDES!*</i></p>
<p><b>HYPOTENUSE-LEG (HL)</b></p>  <p style="text-align: center;"><i>*ONLY WORKS IN <b>RIGHT TRIANGLES</b> – HYPOTENUSE IS <b>ACROSS</b> FROM <b>RIGHT ANGLE</b>, THE TWO OTHER SIDES ARE <b>LEGS</b>!</i></p> <p style="text-align: center;">IN ORDER TO USE HL, YOU MUST FIRST STATE YOU HAVE RIGHT ANGLES AND RIGHT TRIANGLES!</p> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <p>STATEMENT #1: <math>\angle QRS</math> and <math>\angle XYZ</math> are right angles</p> <p>STATEMENT #2: <math>\triangle QRS</math> and <math>\triangle XYZ</math> are right triangles</p> </div> <div style="width: 45%;"> <p>REASON #2: Perpendicular lines form right angles</p> <p>REASON #2: Right Triangles have one right angle</p> </div> </div>	

## METHODS THAT **CANNOT** BE USED TO PROVE TRIANGLES ARE CONGRUENT:

<p style="text-align: center;"><b>ANGLE-ANGLE-ANGLE (AAA)</b></p> 	<p style="text-align: center;"><b>SIDE-SIDE-ANGLE (SSA)</b></p> 
---	--

VISUAL FREEBIES!

VERTICAL ANGLES	REFLEXIVE POSTULATE

TOPIC #2: CPCTC

CORRESPONDING PARTS OF CONGRUENT TRIANGLES ARE CONGRUENT!

PARTS = SIDES AND ANGLES!

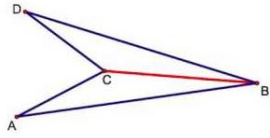

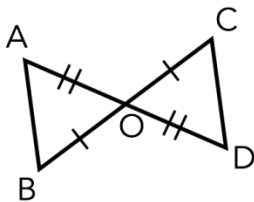

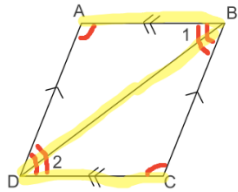

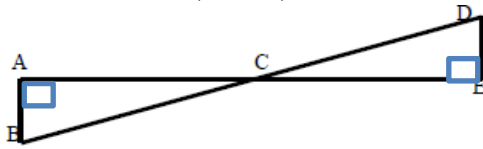

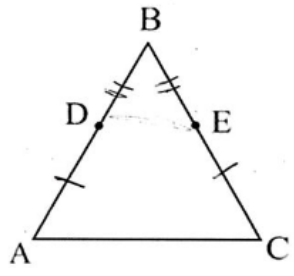

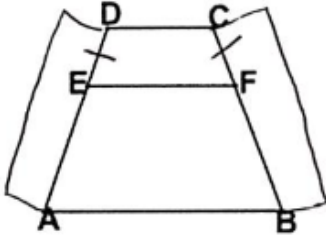

**\*\*HOW DO WE KNOW WHEN TO SAY "CPCTC?"\*\*** When the PROVE statement is not a triangle congruence statement!

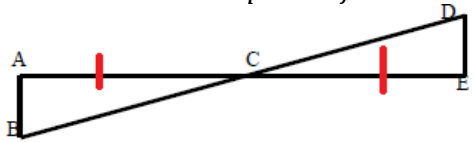

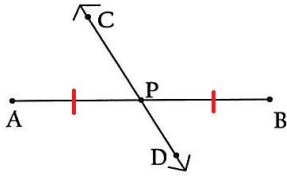

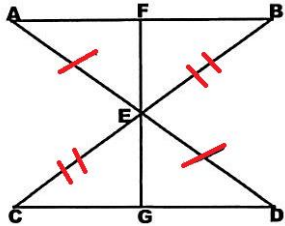

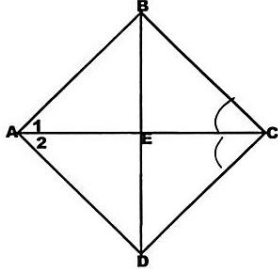

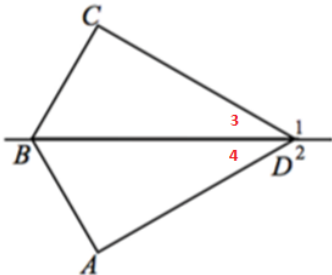

<p>Given: <math>\overline{AB} \parallel \overline{CD}</math> and <math>\overline{AB} \cong \overline{CD}</math>            Prove: <math>\overline{AD} \cong \overline{CB}</math></p>	<p>Given: <math>\overline{CB} \perp \overline{DA}</math>  <math>\triangle DCA</math> is isosceles with base <math>\overline{DA}</math>            Prove: <math>B</math> is the midpoint of <math>\overline{DA}</math></p>								
<table border="1"> <thead> <tr> <th>STATEMENT</th> <th>REASON</th> </tr> </thead> <tbody> <tr> <td> </td> <td> </td> </tr> </tbody> </table>	STATEMENT	REASON			<table border="1"> <thead> <tr> <th>STATEMENT</th> <th>REASON</th> </tr> </thead> <tbody> <tr> <td> </td> <td> </td> </tr> </tbody> </table>	STATEMENT	REASON		
STATEMENT	REASON								
STATEMENT	REASON								

**\*\*ORDER OF STATEMENTS\*\***

1.)	<p><b>TRIANGLE CONGRUENCE STATEMENT</b></p> <p>Example: <math>\triangle DCB \cong \triangle ACB</math></p>	<p><b>POSTUALTE</b></p> <p>Example: <math>HL \cong HL</math></p>
2.)	<p><b>CORRESPONDING "PARTS" – ANGLES OR SIDES</b></p> <p>Example: <math>\overline{DB} \cong \overline{BA}</math></p>	<p><b>CPCTC</b></p> <p>Example: CPCTC</p>
3.)	<p><b>PROVE STATEMENT</b></p> <p>Example: <math>B</math> is the <b>midpoint</b> of <math>\overline{DA}</math></p>	<p><b>DEFINITION</b></p> <p>Example: A <b>midpoint</b> creates two congruent segments</p>

**TOPIC #3: COMMON PROOF STATEMENTS**

POSTULATE/FACT	HOW TO RECOGNIZE IT/WHAT TO SAY	EXAMPLE
<p><b>Reflexive Property</b></p>	<p>Where the colors overlap/the side or angle the triangles share</p> <p><i>REASON:</i> Reflexive Property</p>	
<p><b>Vertical Angles</b></p>	<p>The bowties/The "X"</p> <p><i>REASON:</i> Vertical angles are congruent</p>	<p><math>\sphericalangle AOB \cong \sphericalangle COD</math></p> 
<p><b>Parallel Lines</b> → Alternate Interior Angles</p>	<p>The "Z"!</p> <p><i>REASON:</i> When two parallel lines are cut by a transversal, alternate interior angles are congruent</p>	<p><math>\sphericalangle 1 \cong \sphericalangle 2</math></p> 
<p><b>Perpendicular Lines</b> → Right Angles</p>	<p>Follow the segments to see intersection If they share the same letter, that's where the right angle goes!</p> <p><i>REASON:</i> Perpendicular lines form <b>CONGRUENT</b> right angles</p>	<p>If <math>\overline{AB} \perp \overline{AE}</math>, the right angle would be at A If <math>\overline{DE} \perp \overline{AE}</math>, the right angle would be at E</p> <p><math>\sphericalangle A \cong \sphericalangle E</math></p> 
<p><b>ADDITION PROPERTY</b></p>	<p>Given two small parts of a side</p>	<p>Given: <math>\overline{AD} = \overline{CE}</math> and <math>\overline{DB} + \overline{EB}</math>  <math>\overline{AB} = \overline{BC}</math>  <math>\overline{AB} = \overline{AD} + \overline{DB}</math>  <math>\overline{BC} = \overline{CE} + \overline{EB}</math></p> 
<p><b>SUBTRACTION PROPERTY</b></p>	<p>Given a large part and a small part of a side</p>	<p>Given: <math>\overline{AD} = \overline{CB}</math> and <math>\overline{DE} = \overline{CF}</math>  <math>\overline{AE} = \overline{AD} - \overline{DE}</math>  <math>\overline{FB} = \overline{BC} - \overline{CF}</math></p> 

<p><b>Midpoint</b></p>	<p>Two "tick" marks only go on the segment named after the word midpoint.</p> <p><i>REASON:</i> A midpoint creates two congruent segments</p>	<p><i>C is the midpoint of <math>\overline{AE}</math></i></p> 
<p><b>Segment Bisector</b></p>	<p>Two "tick" marks <b>only</b> go on the segment named after the word bisect.</p> <p><i>REASON:</i> A bisector creates two congruent segments</p>	<p><math>\overline{CD}</math> bisects <math>\overline{AB}</math> at P</p>  <p><math>\overline{AD}</math> and <math>\overline{CB}</math> bisect each other at E</p> 
<p><b>Angle Bisector</b></p>	<p>The "arc" marks <b>only</b> go on the angle named after the word bisect.</p> <p><i>REASON:</i> A bisector creates two congruent angles</p>	<p><math>\overline{AC}</math> bisects <math>\angle BCD</math></p> 
<p><b>Supplements</b></p>	<p><math>\angle 1 + \angle 3 = 180^\circ</math>  <math>\angle 2 + \angle 4 = 180^\circ</math></p> <p><i>REASON:</i> Linear pairs are supplementary, therefore</p> <p><math>\angle 3 \cong \angle 4</math></p> <p><i>REASON:</i> Supplements of congruent angles are congruent</p>	<p>If <math>\angle 1 \cong \angle 2</math>, then <math>\angle 3 \cong \angle 4</math></p> 
<p><b>Isosceles Triangles</b></p>	<p>When given two congruent sides, you can assume the base angles are also congruent.</p> <p><i>REASON:</i> Isosceles triangles have two congruent base angles OR Isosceles triangles have two congruent sides.</p>	<p><math>\triangle LMN</math> is an Isosceles Triangle</p> <p><math>\overline{LM} \cong \overline{NM}</math>  <math>\angle L \cong \angle N</math></p>
